	S/0390/19/TC	23, High Street, Great Shelford, Cambridge, Cambridgeshire, CB22 5EH	Thuja tree, is in the front right hand corner of our garden. It is about 50 cm from the boundary wall and about 2 meters from the side of the neighbour's house. It is at least 40 year's old and has now grown to be higher than the neighbour's house and is touching the walls and obscuring light to their side windows. We are concerned that it is a danger to their house foundations. It has low amenity value. We will replace this tree with an Acer which will grow in this shady position and be a more appropriate size and more attractive. We have looked after our gardens very carefully and over the last few years we have planted 16 trees in the back garden and 5 in the front garden with a preexisting wild plum tree. 	S/0457/19/TC	42, Tunwells Lane, Great Shelford, Cambridge, Cambridgeshire, CB22 5LJ	1) Atlantic Cedar - fell. We have been monitoring the decline of this tree in the middle of number 42's drive for the last 10 years or so. It has very poor needle cover now and the needles that it does have are very small for it's species. It has lost its amenity value. 	S/0681/19/TP	202, Cambridge Road, Great Shelford, Cambridge, Cambridgeshire, CB22 5JU	1) Birch - reduce branch growing from decaying stump by 15%. This branch grows towards the lamp post and Cambridge Road and is over the footpath. It is growing from a decaying pruning wound (where it appears that the top of the tree was cut off!) - see drawing on sketch plan showing the extent of decay. The extent of the decay appears to be outside of Matteck's failure criteria but given exposed birch xylem tissue's propensity to decay and the heavy use of the footpath and the road it would be sensible to lessen the load on this branch. The proposed reduction will reduce leverage and wind loading forces on the branch union and prolong the time before the branch fails.
