

## Request 7894 – Decarbonisation

Please can you answer the following questions with regard to your council housing stock:

- What is the current average SAP rating for your housing stock?
- What targets have you set to achieve net zero carbon, or carbon reductions, within your housing stock? What dates have you set to achieve these targets?
- Have you developed a definition for what 'net zero' will look like in your housing stock? (i.e. X% reduction in carbon emissions, target for average SAP rating etc). Please can you provide details of this.
- How much do you expect it to cost to achieve your carbon reduction targets for your housing stock? Please provide this number as a total for all of your stock and as an average price per unit.

### Response

1. As at 30/06/2020 SAP rating was 77.07
2. Currently no targets have been set we are working to a 2050 deadline. Net Zero however, will be unachievable until the national grid is producing 100% renewable energy.
3. No this has not been set yet.
4. Energy survey work carried out via Savills suggested an investment of £35k on average was needed across our stock to achieve carbon neutral.
