

**28/06/2010 Notification of CNPI from Harrow Estates by email**

We have received the Characterisation results for grid squares I8 and K10. I understand two compounds have been identified which were not identified during site investigation however, I understand that both of these have been identified as CNPI in earlier grid squares, therefore no new additional compounds have been identified. I am informed that these will be reported in the report due by the 8<sup>th</sup> July.

Regards

Mark Nicholls
