

RAMPTON DRIFT EDGE

The existing landscape of Rampton Drift is planned to be integrated and enhanced to create an active landscape interface between the new development and the existing low-density community. The edge of Rampton Drift will be designed as low density housing and will include improved edge landscaping, delivered during the early phases on Northstowe, to mitigate impacts.

The proposed landscape should preserve and incorporate the existing green assets of Rampton Drift and would fulfil an important role in creating a common ground for new and existing residents. The area will include a linear meadow and a denser buffer with woodland trees. The layering of this relatively narrow landscape strip will configure a green separation between the two residential areas while partly maintaining a visual link.
